EDUCATION

Minerva University

B.S. Data Science and Economics

San Francisco

Aug 2024 – May 2028

EXPERIENCE

ChatVLM

Mountain View, CA

Forward Deployed Engineer

July 2026 - Present

- Deployed quantized open-weight LLMs on-prem for 2 enterprise clients, cutting inference cost 62% and eliminating external data egress.
- Built client-specific RAG pipelines over 400K+ documents (hybrid retrieval + reranking + citations), raising answer accuracy from 61% to 94%.
- Shipped 3 MCP servers exposing client CRM, Postgres, S3, and internal APIs as governed tools, cutting integration build time from 3 weeks to 4 days.

Safecast

Tokyo, Japan

Software Developer (part-time)

Jan 2025 – Present

- Built an MCP-based AI assistant in the Safecast map for natural language queries over 200M+ radiation measurements, cutting time-to-insight from 4 minutes to under 15 seconds.
- Engineered streaming API integration with scoped key management across 3 data services, holding p95 latency under 2s at 10K+ monthly queries.
- Shipped neutrality guardrails and dual deployment modes (standalone + embedded), reducing speculative model responses 78% on a 500-query eval set.

UL Solutions

Fremont, CA

AI Automation Intern

Apr 2025 – Aug 2025

- Built Python automation for wireless test execution, using INT8-quantized local LLMs for script generation, cutting setup time from 40 to 12 minutes.
- Ran FCC Part 15 compliance testing across WiFi, Bluetooth, NFC, UWB, and wireless power, hitting 96% first-pass across 240+ variants.
- Automated Excel-to-.docx reporting for 100+ test outputs, helping to cut manual work each time after tests are completed.

International Space Alliance

San Francisco, CA

Machine Learning Intern

Sep 2024 – Apr 2025

- Engineered range.ai, a GenAI decision-support system, integrating OpenAI's API and Hugging Face transformers to deliver evidence-based recommendations.
- Integrated California-specific agricultural research to deliver accurate, evidence-based recommendations.
- Conducted iterative prototyping and user testing, refining accessibility through farmer feedback.

ACCOMPLISHMENTS

- Winner, "Most Impressive Engineering Lift," c0mpiled-7 AI Hackathon (YC RFS), Tokyo (Mar 2026) — built Origin, a multi-agent AI hedge fund platform (LangGraph, AutoGen, FastAPI, Shisa-70B) cutting 10-K research loops to 12s.
- AI Consensus - ran an international essay contest on AI safety, reaching 900 participants across 40 countries.

SKILLS

Technical Skills: Python, SQL, Next.js, HTML/CSS, GitHub, API, Large Language Models (LLMs), Prompt Engineering, AI Engineering, MCP, PyTorch, PostgreSQL, React.

Languages: English (**fluent**), Russian (**fluent**), Uzbek (**native**)

PROJECTS

Matanataki Local RAG Document Agent — Built on-premise RAG agent (Python, LangChain, FastAPI) automating document synthesis and form filling, cutting manual processing time by 65% (saving 154 hours/week).
